

The G2

data sheet

premium ●●●

The G2 is a dynamic, modern shelter which was designed with light, space and comfort as the key factors.

The shelter range can be used as a standard cantilever roadside shelter, through to enclosed waiting areas and large bespoke bus interchanges.

Designed with a robust, formed tubular frame, the G2 passenger shelter has a distinct personality. The curved clear roof and large format, single point glazed side panels provide a very light and spacious environment. The roof design features an integrated water management system and also integrated lighting and specific cabling routes ease of installation and maintenance. RTPI and CCTV can be easily incorporated into the shelter.

The shelter can have either straight or formed posts and there are two different roof end options for the 2000mm and 2500mm wide shelters - a standard roof hoop design or GRP moulded panel.

Manifestations are screen printed onto the glass with the single colour dot or lozenge design included as standard. Price on application for bespoke designs.

A stainless steel version of this shelter is also available.

SIZE

The standard G2 shelter is available in two pitch sizes 1300mm and 1500mm and three widths 1560mm, 2000mm and 2500mm
